

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Canceled).

Claim 2 (Previously Presented): A polycarbonate resin composition comprising a polycarbonate resin (A), 0.001 to 0.1 part by mass of an arylphosphine (B), 0.01 to 1.0 part by mass of an alicyclic epoxy compound (C), and 0.01 to 1.0 part by mass of an acrylic resin (D) per 100 parts by mass of the component (A).

Claim 3 (Currently Amended): The polycarbonate ~~type~~ resin composition according to claim [[1]] 2 further, comprising 0.01 to 1 part by mass of a polysiloxane compound (E) having at least one group selected from alkoxy, vinyl, and phenyl groups per 100 parts by mass of the component (A).

Claim 4 (Currently Amended): The polycarbonate ~~type~~ resin composition according to claim [[1]] 2, further comprising 0.01 to 1 part by mass of a lubricant (F) per 100 parts by mass of the component (A).

Claim 5 (Currently Amended): The polycarbonate resin composition according to claim [[1]] 2, wherein the component (A) of polycarbonate type resin has a glass transition temperature of 140°C or more.

Claim 6 (Currently Amended): The polycarbonate resin composition according to claim [[1]] 2, wherein the component (B) of arylphosphine is triphenylphosphine.

Claim 7 (Currently Amended): An optical part obtained by molding the polycarbonate resin composition according to claim [[1]] 2.

Claim 8 (New): The polycarbonate resin composition according to claim 2, wherein the arylphosphine (B) is present in an amount of from 0.005 to 0.02 part by mass; the alicyclic epoxy compound (C) is present in an amount of from 0.01 to 0.2 part by mass; and the acrylic resin (D) is present in an amount of 0.05 to 0.5 part by mass.

Claim 9 (New): The polycarbonate resin composition according to claim 8, further comprising a polysiloxane compound (E) in an amount of from 0.05 to 1 part by mass.

Claim 10 (New): The polycarbonate resin composition according to claim 9, wherein a 14 cm<sup>2</sup> square plate having thickness of 4mm prepared by injection molding the polycarbonate resin composition at a molding temperature of 300°C and a mold temperature of 100°C is subjected to a steam resistance test by exposing the square plate to an atmosphere of saturated steam at 127°C for 100 hours has a total light transmission evaluated in accordance with JIS-K-7105 of at least 91.1%.

Claim 11 (New): The polycarbonate resin composition according to claim 10, wherein the total light transmission is from 91.1 to 91.3%.

Claim 12 (New): The polyester resin composition of Claim 10, wherein the arylphosphine (B) is triphenylphosphine and the alicyclic epoxy compound (C) has the following formula:

Claim 13 (New): The polycarbonate resin composition according to claim 2, wherein the acrylic resin (D) is polymethylmethacrylate, and the polysiloxane compound (E) is an organosiloxane having phenyl, methoxy, and vinyl groups.

Claim 14 (New): The polycarbonate resin composition according to claim 2, wherein the acrylic resin (D) has a viscosity average molecular weight of from 40,000 to 60,000.

Claim 15 (New): The polycarbonate resin composition according to claim 4, wherein the lubricant (F) is stearic acid monoglyceride.

Claim 16 (New): A transparent lamp lens molded from the polycarbonate resin composition according to claim 2.

Claim 17 (New): The polycarbonate resin composition according to Claim 2, wherein the polycarbonate resin (A) comprises polymerized units of 2,2-bis(4-hydroxyphenyl)propane.
